SUMMARY

AI Solutions Architect with 15+ years building enterprise cloud platforms, specializing in RAG architectures, agentic workflows, LLM-powered systems and document intelligence. Deep architecture experience on Azure and hands-on experience integrating enterprise platforms. Proven track record of leading cross-functional teams and owning end-to-end delivery of scalable, low-latency systems used by thousands of users.

LANGUAGES AND TECHNOLOGIES

Programming: C#, Python, JavaScript (ES6), TypeScript, SQL
Frontend: React, Redux, Angular, D3.js, MVC, HTML5, CSS3
AI/ML: Azure AI Foundry, Azure OpenAI, Azure AI Search, RAG Architectures, LLM Pipelines, Prompt Engineering
Cloud & DevOps: Microsoft Azure (App Services, Functions, AI Search, Cosmos DB, Redis Cache, Logic Apps), AWS (ECS, RDS, API Gateway, Lambda, S3, IAM, CloudWatch)
Frameworks/Tools: .NET Core, ASP.NET MVC, Node.js, REST APIs, Entity Framework Core, Postman, Docker
Databases: SQL Server, Cosmos DB, MongoDB, Redis

EMPLOYMENT

Team Lead / Azure AI Engineer **Tech Mahindra** **Dec 2018 – Present**
Applied Materials and Microsoft

AI Platforms, Copilots, and RAG Systems

- Led design and delivery of **enterprise AI platforms and copilots** using Azure OpenAI, Azure AI Search, and agentic frameworks for 2K+ active users.
- Built **RAG-based architectures** with hybrid search, chunking strategies, and re-ranking pipelines, improving response accuracy and system performance.
- Designed and implemented **multi-agent document intelligence system** processing 70K+ documents/month (OCR, classification, translation, extraction, validation).
- Developed **agentic workflows** orchestrating multi-step LLM pipelines, significantly reducing manual processing effort and turnaround time.

Full-Stack & Cloud Engineering

- Built scalable **React + .NET applications and copilots**, increasing user adoption from 30 to 5000+.
- Architected **low-latency APIs with Redis caching and optimized data models**.
- Owned **Azure cloud infrastructure** (App Services, Functions, Key Vault, Redis, Blob Storage)
- Designed real-time dashboards integrating multiple enterprise data sources for analytics and feedback loops.

Leadership & Delivery

- Led teams (8–20 engineers), driving **architecture, design reviews, and delivery**.
- Owned end-to-end delivery: **system design, development, deployment, and production support**.
- Collaborated with stakeholders and product teams to align technical solutions with business outcomes.

Software Engineer Intern **Icertis** **Summer 2017**

- Designed and built chatbots for seamless integration with REST services accessible via email, Teams, and SMS, improving internal workflow automation.
- Designed and delivered workflow automation and platform integrations across enterprise systems including Workday and ServiceNow, improving operational efficiency and reducing manual effort.

Senior Software Engineer **CitiusTech** **Aug 2015 – July 2016**

Architecture and Exception Handling

- Led architecture and exception handling improvements, reducing exception rates by ~98%.
- Improved code quality through best practices and structured error handling frameworks.

Software Engineer L2 **Rolta India** **Nov 2014 – Jul 2015**

- Developed web applications for government digitization initiatives, improving claims and benefits processing.

Software Engineer **Paramatrix Technologies** **Aug 2012 – Nov 2014**

- Delivered high-impact applications, including those for calculating sales bonuses and monitoring employee certifications, contributing to streamlined operations and increased efficiency within client organizations.

PROJECTS

Agent Assist – Document Intelligence Platform (2025–Present)

- Architected a multi-agent document processing platform using Azure AI Foundry, Azure OpenAI, and Azure Document Intelligence for high-volume enterprise document automation.
- Built orchestration workflows for OCR, language detection, document classification, structured data extraction, validation, and AI-generated summarization with human review checkpoints.

Crystal RAG + Copilot Platform (2024–Present)

- Designed and built an enterprise RAG platform using Azure OpenAI, Azure AI Search, and Azure AI Foundry, powering AI copilots embedded in Microsoft Teams, CRM, and Office applications.
- Implemented hybrid retrieval, prompt orchestration, citation generation, and feedback-loop pipelines to deliver secure, grounded, and auditable responses for enterprise knowledge management.

Unified Action Tracker

- Led development of a greenfield React/.NET multi-tenant enterprise platform replacing Azure DevOps workflows with a centralized action management system.
- Designed scalable APIs, optimized data models, analytics dashboards, and migration tooling with Redis-backed low-latency architecture.
- Migrated **10K+ records with zero data loss** while supporting global enterprise users with high availability and operational reliability.

Microsoft 365 Admin Center Feedback Platform

- Built enterprise feedback and analytics components for Microsoft 365 Admin Center using React, .NET, SQL Server, and Azure, driving product insights across a global user base

EDUCATION

Software Engineering (M.S.) **San Jose State University, CA** **August 2016 – May 2018**
Computer Engineering (B.E.) **University Of Mumbai, India** **August 2007 – May 2011**
